

SETTING UP EPICS, FEATURES, AND USER STORIES FOR PROJECT PLANNING

AIM:

To learn about how to create epics, user stories, features, backlogs for your assigned project.

PROCEDURE:

CREATE EPICS, FEATURES, USER STORIES, TASKS

1. FILL IN EPICS

2. FILL IN FEATURES

The screenshot shows the Azure DevOps interface for a project named 'Appointment_Booking_System'. The left sidebar contains navigation options: Overview, Boards, Work items, Backlogs, Sprints, Queries, Delivery Plans, Analytics views, Repos, and Project settings. The main area displays a 'Recently updated' list with a feature work item titled '9 Secure Login and Role-Based Access'. The work item details are shown below the title, including a description, planning information, and deployment instructions.

Feature 9: Secure Login and Role-Based Access

Description: This feature enables secure login and access control for patients, doctors, and administrators. It ensures that users can only access functionalities based on their roles, maintaining privacy and protecting sensitive patient information.

Planning:

- Priority: 2
- Risk:
- Effort:
- Business Value:
- Time Criticality:

Deployment:

To track releases associated with this work item, go to [Releases](#) and turn on deployment status reporting for Boards in your pipeline's Options menu. [Learn more about deployment status reporting](#)

3. FILL IN USER STORIES:

The screenshot shows the Azure DevOps interface for the same project. The left sidebar is identical. The main area displays a 'Recently updated' list with a user story work item titled '31 Secure Data Handling and System Monitoring'. The work item details are shown below the title, including a description, acceptance criteria, planning information, and deployment instructions.

User Story 31: Secure Data Handling and System Monitoring

Description: As an admin, I want the system to securely store patient data and monitor system performance, So that data privacy is maintained and system reliability is ensured.

Acceptance Criteria:

- Patient data should be securely stored and protected
- System should log errors and system activities
- Admin should be able to monitor system performance

Planning:

- Story Points:
- Priority: 2
- Risk:

Classification:

- Value area:

Deployment:

To track releases associated with this work item, go to [Releases](#) and turn on deployment status reporting for Boards in your pipeline's Options menu. [Learn more about deployment status reporting](#)

RESULT:

Thus, the creation of epics, features, user stories and tasks has been successfully created.
